Mineral Research and Development Corp.	NC D048467427
Texas City Refining Co.	NC D000770016
The Valspar Corp.	NC D041415019

Dear Ms. Bland:

Submitted herewith are Preliminary Assessment reports for the subject sites.

Based on the NC RCRA 3012 Program review of the available data, we have concluded the following:

American Petrofina Marketing/Selma Terminal (NC D000770032) notified under CERCLA that rainwater layers from tanks were pumped onto the ground within tank containment structures between 1973 and 1980. It is also conceivable that previous owners, B.P., Sinclair, et al., disposed RCRA type wastes K049-K052 on site prior to 1980. Status assigned is Low.

BASF Wyandotte Corp. (NC D003149705) is not on file at the NC Solid and Hazardous Waste Management Branch as having had on-site disposal or releases of hazardous substances and BASF officials, both in Charlotte and at the corporate environmental office in New Jersey, attest to this. A comprehensive report of past waste handling activities is forthcoming from the corporate office in Parsippany, NJ. Status assigned is No Further Action.

Coastal Chemical Corp. (NC D003186178) formulates and distributes pesticides and agricultural products. On February 19, 1979, this facility

caught fire and burned; the result of this was that pesticides were released in massive proportions onto the facility property. Although some on-site treatment of these waste pesticides was instigated, contaminants are still believed to remain on the premises. Status assigned is Medium

Crown Central Petroleum Corp. (NC D044447639) notified under CERCLA that leaded tank bottoms were buried within the spill containment area of each tank between 1948 and 1974. Local residents use municipal water supply rather than private drinking wells. Status assigned is Low.

Martin's Battery Salvage, Inc. (NC D991278755) operated prior to November 19, 1980, though precise dates are unknown. Facility's function was to reclaim lead from car batteries. Units on-site include a drain field which leads to a receiving stream, and a surface impoundment. Excessive levels of cadmium, chromium, lead, and EP corrosive waste have been identified on-site, and groundwater contamination is alleged. Status assigned is Medium

Mineral Research and Development Corp. (NC D048467427) maintains five unlined surface impoundments. Monitoring wells indicate that chromated copper arsenate constituents, trichlorobenzene and tetrachloroethylene have entered the groundwater downgradient from these units. There are no known groundwater users within the influence of this plume; however, its impact upon the environment is deemed severe. Status assigned is Medium.

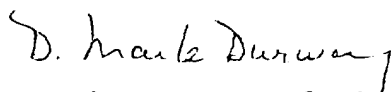

Texas City Refining Co. (NC D000770016) notified under CERCLA that rainwater layers from tanks were pumped onto the ground within tank containment structures between 1973 and 1980. It is also conceivable that previous owners of this facility disposed RCRA wastes K049-K052 on site, as this was a common practice of the petroleum industry prior to 1980. Status assigned is Low.

The Valspar Corp. (Nc D041415019) was previously owned by Mobil Chemical Co. In 1979 Mobil notified, as required for the Eckhardt Survey, that no waste was disposed of or released on site between 1976 and 1979. Records for the period 1961 to 1976 did not exist; therefore it is conceivable that releases might have occurred during this period, or the period prior when the site was owned (at different times) by Martin-Marietta and an unnamed furniture company. Status assigned is Low.

On April 19, 1985, the Department of Human Resources Assistant Branch Head of Solid and Hazardous Waste Management, Jerry Rhodes; and 3012 Personnel reviewed each of the subject sites along with Natural Resources and Community Development Department personnel from Water and Air Quality and Groundwater Sections. Each of the subject site recommendations was approved by the committee.

If you have any questions, please contact me.

Sincerely,

D. Mark Durway, Geologist
Solid and Hazardous Waste Management Branch
Environmental Health Section

04 DESCRIPTION OF SUBSTANCES POSSIBLY PRESENT, KNOWN, OR ALLEGED

Records at the NC Solid and Hazardous Waste Management Branch indicate that the facility is in compliance with RCRA regulations, and that no on-site releases of hazardous substances are known.

05 DESCRIPTION OF POTENTIAL HAZARD TO ENVIRONMENT AND/OR POPULATION

None known. According to Ken Koneval, of the BASF corporate environmental office, no on-site disposal, spills, or other releases have occurred at the BASF facility since the facility commenced operation. A comprehensive report of past waste handling activities is forthcoming from the corporate environmental office in Parsippany, New Jersey.

Attn: Waste Determination

Gentlemen,

During a transportation related incident, some of our finished products, Lipoderm Oil SK and Basyntan N, were spilled along the highway. These products are relatively harmless in nature. The Lipoderm Oil SK is a chlorinated paraffin oil and the Basyntan N is a condensed polymer of sulfonated phenol and urea formaldehyde. A sample was pulled at the time of the incident by Rowe Industrial Services, Inc. and submitted to Par Labs for analysis (a copy of the analysis is attached). The initial analysis showed an incorrect arsenic value. Par Labs was asked to rerun the waste sample to determine whether arsenic was indeed present. By means of a gaseous hydride method, the reanalysis showed less than 0.05 ppm of arsenic present.

The analysis performed was done on liquid sample obtained from the scene prior to absorbing the spilled material with sand. The waste to be disposed of now is well absorbed in sand and appears totally dry. There is no free liquid in the waste material we now propose to dispose of at the York Road land-fill.

Please let me know if we can help you further with your determination.

Sincerely yours,

BASF WYANDOTTE CORPORATION
Charlotte Plant

DATE OF INSPECTION

July 8, 1982

APPLICABLE REGULATIONS

40 CFR May 19, 1980

Parts 262 and 265, Subparts A,B,C,D,E,G,H (if applicable) and I

PURPOSE OF SURVEY

RCRA inspection for interim status including review of records, site survey and sampling procedures. Regulatory requirements covered included those contained in 40 CFR May 19, 1980 Part 262 - Generator Standards and 265 - General Facility standards including Subparts A,B,C,D,E,G,H (if applicable) and I.

FACILITY DESCRIPTION

BASF Wyandotte Corporation is located on a 15.26 acre site in north Charlotte at 4330 Chesapeake Drive. This facility presently manufactures approximately 175 chemical auxiliaries for the textile, paper and leather industries. A more general description is provided on the attached document from Wyandotte's Emergency Procedures Manual (attachment A).

This facility does not routinely generate hazardous waste from manufacturing; however, on occasions, a bad product batch is generated which may be hazardous or a cleaning operation may generate several drums of flammable solvents. BASF Wyandotte does, on occasions, generate more than 1000 kg. per 30 calendar days and does store hazardous waste for more than 90 days.

A review of Wyandotte's manifest records indicates that this facility has generated the following wastes:

1. RA-1 Solids w/10% Phenol
2. Waste Phenol (Poison B)
3. Polymine Waste containing 1,4 Dioxane
4. Carbon Disulfide (liquid)

All waste is being transported by Bryson Env. Services of West Columbia, SC to SCA Chemical Services of Pinewood, SC.

During our inspection, Wyandotte had in storage two 55-gallon steel drums weighing approximately 1100 lbs. (total weight) of waste Carbon Disulfide liquid generated from a cleaning operation. The drums were properly

labeled, packaged and stored awaiting incineration at a facility not yet chosen by Wyandotte. The storage area is located in Building #2 immediately north of the office/laboratory building (see attachment B - Hazardous Waste Storage Area Log provided by Wyandotte).

In summary, this facility is a large generator and storer of hazardous waste. At the time of the inspection, BASF Wyandotte appeared to be in full compliance with all applicable regulations under 40 CFR May 19, 1980.

EMERGENCY PROCEDURES MANUAL

BASF Wyandotte Corporation		Charlotte Plant
Spill Prevention Control and Countermeasures Plan		
DATE ISSUED: 01-05-1982 . BY: W.A. FORBES, JR. APPROVED:		
REVISED:	BY:	APPROVED:

V. Description of Facilities:

A. LOCATION OF THE CHARLOTTE PLANT:

The Charlotte Plant of BASF Wyandotte Corporation is located on a 15.26 acre site inside the city limits of Charlotte in Mecklenburg County. The plant site is in an industrial area on the north side of Charlotte, just north of Interstate 85 and east of N.C. #16. The property is bordered on the west by Chesapeake Drive, on the east by Pompono Road (unpaved), on the north by property of Uster Corporation, and on the south by a warehouse complex. The Company also owns a one acre undeveloped plot on the east side of Pompono Road and a 20.28 acre undeveloped plot on the west side of Chesapeake Drive, a portion of which fronts on Lawton Road.

B. SITE PLAN AND BUILDINGS:

There are four major buildings on the site:

1. Office/Laboratory Building - southern side of site, adjacent to neighboring warehouse; surrounded on three sides by drive-ways and parking area. The west end of the building is devoted to office space, comprising about 40% of the total building area; the remaining 60% of building area on the east end is predominantly laboratory areas. A basement containing sample storage, Conference Room, Computer Room, and equipment areas is located beneath the laboratory (east) portion.
2. Warehouse/Manufacturing/Drumming Station/Dye Mix Building - immediately north of the Office/Laboratory Building and connected to it by a covered walkway. The Warehouse is located in the single-floor west end; Manufacturing (Auxiliaries) occupies the three-floor area in the east end. The Drumming Station area is a single-floor addition north of the Manufacturing (Auxiliaries); this addition also contains the Manufacturing (Dye Mix) areas, a two-floor liquid mixing/dye finishing area in the northeast area and a single-floor powder dye mixing area in the east end.

B. SITE PLAN AND BUILDINGS: (CONTINUED)

3. Raw Material Warehouse - a 10,000 square foot metal building located northeast of the Manufacturing Building, across a paved drive and rail siding.
4. Maintenance Shop - metal building located due east of the Manufacturing (Auxiliaries) area and adjacent to Pompono Road (unpaved).

There are also three small outbuildings or other structures at the site:

Paint Shed - small metal building between the Maintenance Shop and Pompono Road. Used to store paints, drum quantities of lubricants, and small quantities of solvents.

Metering Station - small metal building located between the Laboratory area and the Maintenance Shop. Used to house equipment used to meter process waste water from Holding Ponds to Charlotte-Mecklenburg Sewer System.

Waste Water Control Room - located southeast of the Maintenance Shop, at the south end of the dual Holding Ponds for process waste water. Used to house electrical switches for the various pumps used in transferring waste water.

C. RAW MATERIAL AND FINISHED PRODUCT BULK STORAGE:

1. Both finished products and organic and inorganic chemical raw materials are stored in a 9,000 square foot Tank Farm located adjacent to and east of the Powder Dye Mix area. All storage tanks are vertical and range in size from about 3,000 gallons to 27,000 gallons. All of the thirty storage tanks are single-compartment vessels; 22 tanks are of stainless steel construction, 6 are steel, and 1 is fiberglass. The entire Tank Farm is enclosed by a dike. Total storage volume of all tanks is approximately 315,000 gallons.
2. Two storage tanks, one steel and one fiberglass, located next to the Sulfo-chlorination Plant (in the corner of the Manufacturing/Powder Mix areas) have a total capacity of about 9,000 gallons.
3. Three Intermediate Tanks and one Distillation Receiver Tank with a total capacity of approximately 19,000 gallons are located outside the Manufacturing (Auxiliaries) area on the east side.

NOTE: Storage of powder and liquid raw materials and finished products in drums, bags, or other containers is in the Warehouse, various Manufacturing areas, the Raw Material Warehouse and its dock, areas outside Manufacturing, and at a leased Warehouse at 4201 Chesapeake Drive.

D. FUEL OIL STORAGE:

A 29,720 gallon horizontal, underground steel storage tank is used to store fuel oil (ordinarily #2) for the 350 and 800 HP steam boilers. The storage tank is located between the Office/Laboratory Building and the Warehouse, at the extreme west end near the employee's parking lot. Fuel oil is an alternate fuel for the boilers; natural gas is used almost exclusively, except in extreme cold weather when the gas supplier orders industrial users to shut down. When fuel oil is being used, the Maintenance Department checks the quantity in the storage tank daily, and 7,000 gallon tank truck shipments are requested only when level measurement indicates an available capacity of at least 10,000 gallons in the tank. Unloading of tank trucks is accomplished using gravity flow through three-inch hoses to a valved three-inch "quick-connect" coupling which leads to the storage tank. This unloading connection is located at the edge of the employee parking lot at the west end of the Warehouse. The connection is kept plugged and locked except during unloading.

E. PLANT SECURITY:

The Auxiliaries Manufacturing area operates three shifts, 24 hours per day, Monday through Friday. Most other departments work daylight hours only, approximately 8:00 AM until 5:00 PM, Monday through Friday. The Wackenhut Corporation provides security guards from about 5 PM on Fridays until about 8 AM on Monday mornings; security guards are also on duty on holidays. With the exception of the Office/Laboratory Building, all site areas are fenced; all gates and doors are locked after about 6:30 PM on weekdays and throughout weekends and holidays. Keys to gates are restricted to members of supervision and management, and sign-in sheets must be used to record activity in and out. Evening and night shift supervisors have limited responsibility for plant security checks and inspections.

F. SITE DRAINAGE AND WASTE WATER DISPOSITION:

The Charlotte site is located near the crest of a slight slope, the crest being to the northwest (Uster Corp.). The site has been graded so that rain water, except as noted below, is collected and discharged into a storm drain system which empties into Stewart Creek, near the southeast corner of the property. Rain water from the paved areas around the Tank Farm is collected in a separate drain system which terminates in a Storm Drain Collection Pit adjacent to the Waste Water Metering Station; water collected in this Pit is generally pumped over to the Waste Water Holding Ponds, although the Pit is equipped with a drain valve which enables draining to Stewart Creek. All process waste water from Laboratory, Warehouse, Manufacturing, and Tank Farm areas is collected in a Waste Water Collection Pit at the northeast end of the Laboratory Building; waste water is then pumped from this Pit into the Holding Ponds. Waste water is pumped from the Holding Ponds to the Metering

Solid & Hazardous Waste Management Branch

PROCEDURE AND CRITERIA FOR WASTE DETERMINATION

This procedure will be used by the Division of Health Services to determine whether a waste is (1) hazardous as defined by 10 NCAC 10F, and (2) suitable for disposal at a solid waste management facility.

The types of wastes that will be evaluated by this procedure are primarily, but not exclusively, industrial and commercial wastes and sludges, and Publicly Owned Treatment Works sludges.

The Division of Health Services reserves the right to request additional information or waive some of the requirements based on the type of waste if it deems necessary. The Division may also require some wastes to be treated or altered to render the waste environmentally immobile prior to disposal at a sanitary landfill. Wastes disposed at sanitary landfills must be non-liquid and in a form that can be confined, compacted, and covered in accordance with the "Solid Waste Management Rules". APPROVAL TO DISPOSE OF THE WASTE SHALL ALSO BE OBTAINED FROM THE OWNER OR OPERATOR OF THE LANDFILL PRIOR TO DISPOSAL.

The following information is required for an evaluation. An asterisk (*) denotes information required for Publicly Owned Treatment Works.

* GENERAL INFORMATION

- NE0003749705
1. Who generates the waste? BASF WYANDOTE CORPORATION
4330 Chesapeake Drive, Charlotte, NC
 2. What is the waste? SPILLAGE FROM TRANSPORTER ACCIDENT ABSORBED
IN SAND
 3. What volume of disposal will there be? 4-5 cubic yards (approx)
 4. What frequency of disposal will there be? ONE TIME
 5. Describe the process which generates the waste. TRUCK CARRYING
FINISHED PRODUCTS STOPPED FAST. SHIPPING LOAD BROKE OPEN
7 DRUMS. 3 OF UNCRACKED PARAFFIN OIL AND 4 OF SULFONATED
PHENOL/UREA-FORMALDEHYDE CONDENSATION POLYMER. THE
MIXTURE WAS ABSORBED IN SAND AND SUCKED INTO A VACUUM
TRUCK.

(more)

INFORMATION FOR HAZARDOUS (RCRA) DETERMINATION (10 NCAC 10F .0029)

1. Is the waste listed under .0029(e) (40 CFR 261.31 - 261.33)? If yes, list number. NO
2. Does the waste exhibit any of the four characteristics as defined by .0029(d) (40 CFR 261.21 - 261.24)? (Attach Lab Results)
(* EP Toxicity for metals and pH). N/O

INFORMATION FOR LANDFILLING DETERMINATION

1. Does the waste contain any hazardous waste constituents listed in .0029(e), Appendix VIII (40 CFR 261, Appendix VIII)? If yes, what constituents and what concentration? (Attach Lab Results) _____
2. What other constituents are present and in what concentration? (Attach Lab Results) SAND FLY ASH ABSORBED LIQUID
- * 3. What is the moisture content? _____
- * 4. Which solid waste management facility is the request for?
YORK ROAD LANDFILL
- * 5. Specify how the waste will be delivered - in bulk or containers (i.e., barrels, bags, etc.)? DUMP TRUCK - BULK

"I hereby certify that the information submitted in regard to
(name of waste) is true and correct to the best
of my knowledge and belief."

(signed by requestee)

All questions concerning this "Procedure" should be directed to Gordon Layton or Jerry Rhodes at (919) 733-2178. Answer specific questions in space provided. Attach additional sheets if necessary.

Complete all information, sign and submit to:

EMERGENCY PROCEDURES MANUAL

BASF Wyandotte Corporation	---	Charlotte Plant
Spill Prevention Control and Countermeasures Plan		
DATE ISSUED: 01-05-1982 BY: W.A. FORBES, JR. APPROVED:		
REVISED:	BY:	APPROVED:

V. Description of Facilities:

A. LOCATION OF THE CHARLOTTE PLANT:

The Charlotte Plant of BASF Wyandotte Corporation is located on a 15.26 acre site inside the city limits of Charlotte in Mecklenburg County. The plant site is in an industrial area on the north side of Charlotte, just north of Interstate 85 and east of N.C. #16. The property is bordered on the west by Chesapeake Drive, on the east by Pompono Road (unpaved), on the north by property of Uster Corporation, and on the south by a warehouse complex. The Company also owns a one acre undeveloped plot on the east side of Pompono Road and a 20.28 acre undeveloped plot on the west side of Chesapeake Drive, a portion of which fronts on Lawton Road.

B. SITE PLAN AND BUILDINGS:

There are four major buildings on the site:

1. Office/Laboratory Building - southern side of site, adjacent to neighboring warehouse; surrounded on three sides by driveways and parking area. The west end of the building is devoted to office space, comprising about 40% of the total building area; the remaining 60% of building area on the east end is predominantly laboratory areas. A basement containing sample storage, Conference Room, Computer Room, and equipment areas is located beneath the laboratory (east) portion.
2. Warehouse/Manufacturing/Drumming Station/Dye Mix Building - immediately north of the Office/Laboratory Building and connected to it by a covered walkway. The Warehouse is located in the single-floor west end; Manufacturing (Auxiliaries) occupies the three-floor area in the east end. The Drumming Station area is a single-floor addition north of the Manufacturing (Auxiliaries); this addition also contains the Manufacturing (Dye Mix) areas, a two-floor liquid mixing/dye finishing area in the northeast area and a single-floor powder dye mixing area in the east end.

B. SITE PLAN AND BUILDINGS: (CONTINUED)

3. Raw Material Warehouse - a 10,000 square foot metal building located northeast of the Manufacturing Building, across a paved drive and rail siding.
4. Maintenance Shop - metal building located due east of the Manufacturing (Auxiliaries) area and adjacent to Pompono Road (unpaved).

There are also three small outbuildings or other structures at the site:

Paint Shed - small metal building between the Maintenance Shop and Pompono Road. Used to store paints, drum quantities of lubricants, and small quantities of solvents.

Metering Station - small metal building located between the Laboratory area and the Maintenance Shop. Used to house equipment used to meter process waste water from Holding Ponds to Charlotte-Mecklenburg Sewer System.

Waste Water Control Room - located southeast of the Maintenance Shop, at the south end of the dual Holding Ponds for process waste water. Used to house electrical switches for the various pumps used in transferring waste water.

C. RAW MATERIAL AND FINISHED PRODUCT BULK STORAGE:

1. Both finished products and organic and inorganic chemical raw materials are stored in a 9,000 square foot Tank Farm located adjacent to and east of the Powder Dye Mix area. All storage tanks are vertical and range in size from about 3,000 gallons to 27,000 gallons. All of the thirty storage tanks are single-compartment vessels; 22 tanks are of stainless steel construction, 6 are steel, and 1 is fiberglass. The entire Tank Farm is enclosed by a dike. Total storage volume of all tanks is approximately 315,000 gallons.
2. Two storage tanks, one steel and one fiberglass, located next to the Sulfo-chlorination Plant (in the corner of the Manufacturing/Powder Mix areas) have a total capacity of about 9,000 gallons.
3. Three Intermediate Tanks and one Distillation Receiver Tank with a total capacity of approximately 19,000 gallons are located outside the Manufacturing (Auxiliaries) area on the east side.

NOTE: Storage of powder and liquid raw materials and finished products in drums, bags, or other containers is in the Warehouse, various Manufacturing areas, the Raw Material Warehouse and its dock, areas outside Manufacturing, and at a leased Warehouse at 4201 Chesapeake Drive.

D. FUEL OIL STORAGE:

A 29,720 gallon horizontal, underground steel storage tank is used to store fuel oil (ordinarily #2) for the 350 and 800 HP steam boilers. The storage tank is located between the Office/Laboratory Building and the Warehouse, at the extreme west end near the employee's parking lot. Fuel oil is an alternate fuel for the boilers; natural gas is used almost exclusively, except in extreme cold weather when the gas supplier orders industrial users to shut down. When fuel oil is being used, the Maintenance Department checks the quantity in the storage tank daily, and 7,000 gallon tank truck shipments are requested only when level measurement indicates an available capacity of at least 10,000 gallons in the tank. Unloading of tank trucks is accomplished using gravity flow through three-inch hoses to a valved three-inch "quick-connect" coupling which leads to the storage tank. This unloading connection is located at the edge of the employee parking lot at the west end of the Warehouse. The connection is kept plugged and locked except during unloading.

E. PLANT SECURITY:

The Auxiliaries Manufacturing area operates three shifts, 24 hours per day, Monday through Friday. Most other departments work daylight hours only, approximately 8:00 AM until 5:00 PM, Monday through Friday. The Wackenhut Corporation provides security guards from about 5 PM on Fridays until about 8 AM on Monday mornings; security guards are also on duty on holidays. With the exception of the Office/Laboratory Building, all site areas are fenced; all gates and doors are locked after about 6:30 PM on weekdays and throughout weekends and holidays. Keys to gates are restricted to members of supervision and management, and sign-in sheets must be used to record activity in and out. Evening and night shift supervisors have limited responsibility for plant security checks and inspections.

F. SITE DRAINAGE AND WASTE WATER DISPOSITION:

The Charlotte site is located near the crest of a slight slope, the crest being to the northwest (Uster Corp.). The site has been graded so that rain water, except as noted below, is collected and discharged into a storm drain system which empties into Stewart Creek, near the southeast corner of the property. Rain water from the paved areas around the Tank Farm is collected in a separate drain system which terminates in a Storm Drain Collection Pit adjacent to the Waste Water Metering Station; water collected in this Pit is generally pumped over to the Waste Water Holding Ponds, although the Pit is equipped with a drain valve which enables draining to Stewart Creek. All process waste water from Laboratory, Warehouse, Manufacturing, and Tank Farm areas is collected in a Waste Water Collection Pit at the northeast end of the Laboratory Building; waste water is then pumped from this Pit into the Holding Ponds. Waste water is pumped from the Holding Ponds to the Metering

VII. SIC CODES (4-digit, in order of priority)

A. FIRST										B. SECOND									
(specify)										(specify)									
7	2	8	4	3	Surfactant and finishing agent					7									
C. THIRD										D. FOURTH									
(specify)										(specify)									
7										7									

VIII. OPERATOR INFORMATION

A. NAME																									B. Is the name listed in Item VIII-A also the owner?							
BASF Wyandotte Corp																									<input type="checkbox"/> YES <input type="checkbox"/> NO							
C. STATUS OF OPERATOR (Enter the appropriate letter into the answer box; if "Other", specify.)																									D. PHONE (area code & no.)							
F - FEDERAL										M - PUBLIC (other than federal or state)										P (specify)					A		201		263		3400	
S - STATE										O - OTHER (specify)																						
P - PRIVATE																																

E. STREET OR P.O. BOX																									F. CITY OR TOWN										G. STATE		H. ZIP CODE				IX. INDIAN LAND	
P O Box 181																									Parsippany										NJ		07054				Is the facility located on Indian lands? <input type="checkbox"/> YES <input checked="" type="checkbox"/> NO	

X. EXISTING ENVIRONMENTAL PERMITS

A. NPDES (Discharges to Surface Water)										D. PSD (Air Emissions from Proposed Sources)									
9 N										9 P									
B. UIC (Underground Injection of Fluids)										E. OTHER (specify)									
9 U										(specify)									
C. RCRA (Hazardous Wastes)										E. OTHER (specify)									
9 R										(specify)									

XI. MAP

Attach to this application a topographic map of the area extending to at least one mile beyond property boundaries. The map must show the outline of the facility, the location of each of its existing and proposed intake and discharge structures, each of its hazardous waste treatment, storage, or disposal facilities, and each well where it injects fluids underground. Include all springs, rivers and other surface water bodies in the map area. See instructions for precise requirements.

XII. NATURE OF BUSINESS (provide a brief description)

Manufacture of textile finishing agents

All official correspondence regarding this permit should be directed to the office of the Director, Corporate Environmental Protection, BASF Wyandotte Corporation, P.O. Box 181, Parsippany, N.J. 07054

XIII. CERTIFICATION (see instructions)

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this application and all attachments and that, based on my inquiry of those persons immediately responsible for obtaining the information contained in the application, I believe that the information is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

III. PROCESSES - CODES AND DESIGN CAPACITIES					
A. PROCESS CODE - Enter the code from the list of process codes below that best describes each process to be used at the facility. Ten lines are provided for entering codes. If more lines are needed, enter the code(s) in the space provided. If a process will be used that is not included in the list of codes below, then describe the process (including its design capacity) in the space provided on the form (Item III-C).					
B. PROCESS DESIGN CAPACITY - For each code entered in column A enter the capacity of the process.					
1. AMOUNT - Enter the amount.					
2. UNIT OF MEASURE - For each amount entered in column B(1), enter the code from the list of unit measure codes below that describes the unit of measure used. Only the units of measure that are listed below should be used.					
PROCESS		PRO-CESS CODE	APPROPRIATE UNITS OF MEASURE FOR PROCESS DESIGN CAPACITY	PROCESS	
Storage:				Treatment:	
CONTAINER (barrel, drum, etc.)		S01	GALLONS OR LITERS	T01	
TANK		S02	GALLONS OR LITERS	T02	
WASTE PILE		S03	CUBIC YARDS OR CUBIC METERS	T03	
SURFACE IMPOUNDMENT		S04	GALLONS OR LITERS	T04	
Disposal:				OTHER (Use for physical, chemical, thermal or biological treatment processes not occurring in tanks, surface impoundments or incinerators. Describe the processes in the space provided; Item III-C.)	
INJECTION WELL		D79	GALLONS OR LITERS		
LANDFILL		D80	ACRE-FEET (the volume that would cover one acre to a depth of one foot) OR HECTARE-METER		
LAND APPLICATION		D81	ACRES OR HECTARES		
OCEAN DISPOSAL		D82	GALLONS PER DAY OR LITERS PER DAY		
SURFACE IMPOUNDMENT		D83	GALLONS OR LITERS		
UNIT OF MEASURE		UNIT OF MEASURE CODE	UNIT OF MEASURE	UNIT OF MEASURE CODE	
GALLONS		G	LITERS PER DAY	ACRE-FEET	
LITERS		L	TONS PER HOUR	HECTARE-METER	
CUBIC YARDS		Y	METRIC TONS PER HOUR	ACRES	
CUBIC METERS		C	GALLONS PER HOUR	HECTARES	
GALLONS PER DAY		U	LITERS PER HOUR		
EXAMPLE FOR COMPLETING ITEM III (shown in line numbers X-1 and X-2 below): A facility has two storage tanks, one tank can hold 200 gallons and the other can hold 400 gallons. The facility also has an incinerator that can burn up to 20 gallons per hour.

II. PROCESSES (continued)

SPACE FOR ADDITIONAL PROCESS CODES OR FOR DESCRIBING OTHER PROCESSES (code "T04"). FOR EACH PROCESS ENTERED HERE INCLUDE DESIGN CAPACITY.

V. DESCRIPTION OF HAZARDOUS WASTES

EPA HAZARDOUS WASTE NUMBER — Enter the four-digit number from 40 CFR, Subpart D for each listed hazardous waste you will handle. If you handle hazardous wastes which are not listed in 40 CFR, Subpart D, enter the four-digit number(s) from 40 CFR, Subpart C that describes the characteristics and/or the toxic contaminants of those hazardous wastes.

ESTIMATED ANNUAL QUANTITY — For each listed waste entered in column A estimate the quantity of that waste that will be handled on an annual basis. For each characteristic or toxic contaminant entered in column A estimate the total annual quantity of all the non-listed waste(s) that will be handled which possess that characteristic or contaminant.

UNIT OF MEASURE — For each quantity entered in column B enter the unit of measure code. Units of measure which must be used and the appropriate codes are:

ENGLISH UNIT OF MEASURE **CODE**
POUNDS **P**
TONS **T**

METRIC UNIT OF MEASURE **CODE**
KILOGRAMS **K**
METRIC TONS **M**

If facility records use any other unit of measure for quantity, the units of measure must be converted into one of the required units of measure taking into account the appropriate density or specific gravity of the waste.

1. PROCESSES

1. PROCESS CODES:

For listed hazardous waste: For each listed hazardous waste entered in column A select the code(s) from the list of process codes contained in Item III to indicate how the waste will be stored, treated, and/or disposed of at the facility.

For non-listed hazardous waste: For each characteristic or toxic contaminant entered in column A, select the code(s) from the list of process codes contained in Item III to indicate all the processes that will be used to store, treat, and/or dispose of all the non-listed hazardous wastes that possess that characteristic or toxic contaminant.

Note: Four spaces are provided for entering process codes. If more are needed: (1) Enter the first three as described above; (2) Enter "000" in the extreme right box of Item IV-D(1); and (3) Enter in the space provided on page 4, the line number and the additional code(s).

2. PROCESS DESCRIPTION: If a code is not listed for a process that will be used, describe the process in the space provided on the form.

NOTE: HAZARDOUS WASTES DESCRIBED BY MORE THAN ONE EPA HAZARDOUS WASTE NUMBER — Hazardous wastes that can be described by more than one EPA Hazardous Waste Number shall be described on the form as follows:

1. Select one of the EPA Hazardous Waste Numbers and enter it in column A. On the same line complete columns B, C, and D by estimating the total annual quantity of the waste and describing all the processes to be used to treat, store, and/or dispose of the waste.
2. In column A of the next line enter the other EPA Hazardous Waste Number that can be used to describe the waste. In column D(2) on that line enter "included with above" and make no other entries on that line.
3. Repeat step 2 for each other EPA Hazardous Waste Number that can be used to describe the hazardous waste.

SAMPLE FOR COMPLETING ITEM IV (shown in line numbers X-1, X-2, X-3, and X-4 below) — A facility will treat and dispose of an estimated 900 pounds per year of chrome shavings from leather tanning and finishing operation. In addition, the facility will treat and dispose of three non-listed wastes. Two wastes are corrosive only and there will be an estimated 200 pounds per year of each waste. The other waste is corrosive and ignitable and there will be an estimated 10 pounds per year of that waste. Treatment will be in an incinerator and disposal will be in a landfill.

LINE NO.	A. EPA HAZARD. WASTE NO. (enter code)	B. ESTIMATED ANNUAL QUANTITY OF WASTE	C. UNIT OF MEASURE (enter code)	D. PROCESSES
